<b>Office Action Summary</b>	<b>Application No.</b> 10/723,667	<b>Applicant(s)</b> VANDEN BUSSCHE ET AL.	
	<b>Examiner</b> Wayne Langel	<b>Art Unit</b> 1754	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1754

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over British 909,865 in view of either Nystrom et al '852 or Bertsch-Frank et al. British '865 discloses a process for mixing fluids wherein one fluid enters the mixing device radially and another enters tangentially, and teaches on page 1, lines 15-19 that the process may be used for carrying out chemical reactions. The difference between the process disclosed by British '865, and that recited in applicants' claims, is that applicants' claims require a catalyst, and claim 3 requires that the feed streams comprise hydrogen and oxygen, respectively. Nystrom et al '852 and Bertsch-Frank et al both disclose the production of hydrogen peroxide by reacting hydrogen and oxygen in the presence of a catalyst. It would be obvious from either Nystrom et al '852 or Bertsch-Frank et al to employ the process of British '865 for reacting hydrogen and oxygen in the presence of a catalyst, since British '865 teaches that the process may be used for carrying out chemical reactions, and the processes of Nystrom et al '852 and Bertsch-Frank et al both imply that mixing of the hydrogen and oxygen reactants is desirable.

Vogel et al is made of record for disclosing the mixing of fluids wherein one fluid is introduced tangentially and the other radially.

Niedner et al, Bedetti et al and Bossler, III et al are made of record for disclosing various methods for mixing reactants.
